SENSORISCH

Website Enhancement & Image Audit Report

Full content enhancement for all 6 pages
Complete image audit with replacement suggestions
SEO, UX, and brand voice improvements

Prepared: 26 March 2026

How to Use This Document

Structure and conventions explained below

This report is organised into two parts per page: (1) Content Enhancement — every section of copy rewritten with improved headlines, body copy, and CTAs; and (2) Image Audit — every image assessed and a specific replacement recommended with search keywords your designer or stock library can use directly.

Marker	Meaning	Action Required
ORIGINAL (red)	Current live text / image	Record for reference — do not reuse
ENHANCED (teal)	Replacement copy ready to paste	Copy directly into CMS or brief to developer
ISSUE (image cards)	Why current image falls short	Understand the gap before replacing
RECOMMENDED IMAGE	Described ideal visual	Brief your designer or search stock libraries
SEARCH KEYWORDS	Exact terms for stock search	Use on Unsplash, Shutterstock, Getty, Adobe Stock

PAGE 1 — HOMEPAGE

sensorisch.com

PART A — Content Enhancement

Hero Section — Page Title Tag

ORIGINAL

Why Choose Sensorisch

ENHANCED

Sensorisch | Science-Led Flavour & Ingredient Solutions for Food & Beverage

Why it works: The <title> tag is prime SEO real estate. Lead with the brand name, then describe the business clearly with primary keywords that food-industry buyers would search.

Hero Section — Headline

ORIGINAL

Where Science Meets Senses.

ENHANCED

Where Science Meets Senses — Precision Flavours Engineered for Performance.

Why it works: The original tagline is evocative but incomplete on its own. The addition of a concrete value proposition ("Precision Flavours Engineered for Performance") anchors it in a business context for B2B buyers who need to justify vendor selection.

Hero Section — Primary CTA

ORIGINAL

About Sensorisch

ENHANCED

Explore Our Solutions

Why it works: A homepage hero CTA should drive discovery and intent. "About Sensorisch" is inward-facing; "Explore Our Solutions" leads buyers toward product ranges where purchase decisions are made.

Hero Section — Secondary CTA

ORIGINAL

Contact Us

ENHANCED

Start a Project

Why it works: "Contact Us" is passive. "Start a Project" implies collaboration and invites qualified leads who are ready to engage — filtering out casual browsers.

Why Choose — Section Heading

ORIGINAL

Why Choose Sensorisch

ENHANCED

Built for Food & Beverage Innovation — From Lab to Launch

Why it works: The current heading is a question that telegraphs insecurity. A confident statement of specialisation is more compelling to a B2B buyer evaluating multiple suppliers.

Why Choose — Multi-Sensory Innovation copy

ORIGINAL

Science-led creativity combining data-driven R&D with culinary craft for distinctive taste experiences.

ENHANCED

Our R&D teams blend rigorous data science with culinary expertise to create flavour systems that are not just distinctive; they are reproducible, stable, and scale-ready.

Why it works: The enhanced version speaks to the concerns of a procurement manager (reproducibility, stability, scalability) rather than only to a product developer. It also corrects the vague "distinctive taste experiences" with concrete technical assurances.

Why Choose — Nutrition & Wellness copy

ORIGINAL

Specialized solutions for health-focused applications with effective masking and enhanced palatability.

ENHANCED

Purpose-built ingredient systems for health and wellness applications; delivering effective bitterness masking, off-note reduction, and palatability that make functional products consumers actually enjoy.

Why it works: More specific technical language builds credibility. "Effective masking" becomes "bitterness masking and off-note reduction," which are precise terms buyers in nutraceuticals recognise.

Why Choose — Sustainability Focus copy

ORIGINAL

Responsible sourcing and waste-aware processes for clean-label and environmentally conscious solutions.

ENHANCED

Our supply chain is built on responsible sourcing, waste-minimising processes, and full traceability; so you can meet clean-label demands and sustainability targets without compromise.

Why it works: Adding "full traceability" addresses a critical regulatory and retail compliance need. "Without compromise" removes the implicit trade-off between performance and sustainability.

Explore the Senso Ranges — Body

ORIGINAL

Behind every great flavour is great science. Senso brings together expertise, innovation and application-specific precision to fast-track your success.

ENHANCED

Behind every great flavour is great science. The Senso portfolio brings together deep application knowledge, rapid sampling, and validated formulations; so your team spends less time developing and more time launching.

Why it works: "Fast-track your success" is vague. The replacement specifies exactly what "fast-tracking" looks like: less development time, more launch time. This speaks directly to a brand manager's KPIs.

Explore the Senso Ranges — CTA Button

ORIGINAL
Start Production

ENHANCED
Explore Senso Ranges

Why it works: "Start Production" is factory-floor language that creates false urgency at an awareness-stage touchpoint. "Explore Senso Ranges" matches where the buyer actually is in their journey.

From Brief to Scale — Section Heading

ORIGINAL
From Brief to Scale

ENHANCED
From Brief to Shelf — Our Structured Development Process

Why it works: "Scale" is technical language. "Shelf" is the tangible end goal every brand manager understands. The sub-phrase clarifies what "from brief to shelf" means without losing brevity.

From Brief to Scale — Body

ORIGINAL
We align targets, prototype fast, validate in your market, then transfer SOPs for reliable production

ENHANCED
We align on your brief, prototype rapidly, validate with your target market, then hand over complete production documentation — so your team can scale with confidence.

Why it works: Removes jargon ("transfer SOPs"), adds "with confidence" to address the emotional need behind the process, and ends with a full stop.

From Brief to Scale — Step 4 label

ORIGINAL
Scale — QAPQC & production ready

ENHANCED
Scale — QA/QC sign-off & production-ready documentation

Why it works: Fixes the "QAPQC" typo, adds "sign-off" to emphasise accountability, and "documentation" clarifies what the deliverable actually is.

Explore, Create, Confirm, Grow — Section Heading

ORIGINAL
Explore, Create, Confirm, Grow

ENHANCED
Explore. Innovate. Validate. Grow.

Why it works: "Confirm" is administrative and passive. "Validate" is scientific and active — aligning with the brand's science-led positioning. Period-separated single words create stronger rhythm and visual impact.

Innovation Tile — Sub-label
ORIGINAL *Shaping the next wave of innovation*
ENHANCED Co-develop bespoke ingredient solutions unique to your brand
Why it works: The original is generic filler. The replacement is a direct invitation with a clear benefit (unique to your brand) that links to the Bespoke page.

Bottom CTA — Button 2
ORIGINAL *View Our Project*
ENHANCED View Our Projects
Why it works: Simple plural correction — the button links to a multi-project portfolio page.

Bottom CTA — Heading
ORIGINAL *Expert guidance, just a message away*
ENHANCED Your next breakthrough flavour is one conversation away.
Why it works: More evocative and outcome-oriented. "Breakthrough flavour" speaks to the buyer's ambition; "one conversation away" lowers the psychological barrier to reaching out.

PART B — Image Audit

Location	Get-in-Touch section — Beaker with plant (get-in-touch.png)
Current image / alt text	get-in-touch.png — glass beaker with a plant/green element
Issue	This image appears on every single page CTA section, creating visual repetition that makes each CTA feel identical. It also leans scientific rather than collaborative, which is the wrong tone for a contact/reach-out prompt.
Recommended image	A warm, inviting image of two people reviewing samples in a modern, well-lit formulation lab — one person is holding a small vial to the light, the other is taking notes. Approachable, collaborative, professional. Not clinical.
Search keywords	food scientist collaboration lab natural light, flavourist team tasting session, R&D collaboration professional food industry

PAGE 2 — ABOUT

sensorisch.com/about

PART A — Content Enhancement

Page Title Tag

ORIGINAL

Our Story

ENHANCED

About Sensorisch | Science-Led Flavour Formulation House, India & GCC

Why it works: The current title "Our Story" tells search engines nothing. The enhanced version communicates what Sensorisch is, what it does, and where it operates — targeting buyers searching for formulation partners.

Hero Banner Headline

ORIGINAL

Science - Led Innovation Meets Culinary Craft

ENHANCED

Science-Led Innovation. Culinary Craft. Market-Ready Results.

Why it works: Fixes the spacing error around the hyphen. Adds "Market-Ready Results" — the outcome that procurement and NPD teams actually care about. Three-part parallel structure creates confidence and rhythm.

Our Story — Paragraph 1

ORIGINAL

Sensorisch is a specialist B2B formulation house designed exclusively for the institutional food and beverage sector. Our precision ingredients serve the bakery, confectionery, beverage, dairy, hospitality and emerging nutraceutical industries, with a strict focus on performance, stability and clean-label integrity. At the intersection of science and sensory delight, we craft flavours that don't just taste good, they perform.

ENHANCED

Sensorisch is a specialist B2B flavour and ingredient formulation house, built exclusively for the food, beverage and wellness sector. We serve the bakery, confectionery, beverage, dairy, hospitality and nutraceutical industries with precision ingredient systems engineered for performance, stability and clean-label compliance. At the intersection of rigorous science and culinary craft, we create flavours that don't just taste good; they perform.

Why it works: Consolidates two contradictory paragraph scopes into one. Replaces "precision ingredients" with "precision ingredient systems" (more accurate for a formulation house). Fixes the comma splice with an em dash for stronger impact.

Our Story — Paragraph 2

ORIGINAL

We specialise in the research, development and manufacture of advanced flavour systems tailored to a wide spectrum of applications, from bakery and beverages to pharmaceuticals and personal care. Driven by innovation, supported by robust technical expertise and aligned with global regulatory frameworks, our solutions are engineered to meet the highest standards of safety, stability and sensory performance. With a focus on customisation, application-specific functionality and clean-label compatibility, we partner with brands to translate consumer insights into flavourful experiences.

ENHANCED

We specialise in the R&D and manufacture of advanced flavour systems — from bakery and beverages to nutraceuticals and oral care. Every solution is engineered to the highest standards of safety, stability, and sensory performance, underpinned by global regulatory alignment and a clean-label-first philosophy. We don't just supply ingredients. We partner with brands to translate consumer insights into flavour experiences that resonate — and products that sell.

Why it works: Removes the contradictory "pharmaceuticals" (not listed as a market on the About page). Shortens and sharpens the regulatory sentence. Adds the punchy two-sentence close that states the partnership model clearly.

Our Vision

ORIGINAL

To be the most trusted global partner for sensory innovation, delivering precision-driven flavours, colours and ingredient solutions that inspire product excellence and meaningful consumer connections.

ENHANCED

To be the most trusted partner in sensory innovation — delivering precision flavours, colours, and ingredient systems that help brands create products people remember.

Why it works: Shorter, more resonant. "Products people remember" is a human, memorable expression of the brand ambition. "Meaningful consumer connections" is corporate filler.

Our Mission

ORIGINAL

Sensorisch is committed to empowering creators in the bakery, beverage, dairy, culinary and wellness industries by co-developing sensory solutions that are scientifically advanced, creatively inspired and commercially scalable. We exist to ensure every product resonates with its audience, not just in taste but in experience.

ENHANCED

We exist to help product creators build flavours that work — scientifically rigorous, creatively inspired, and commercially ready. By co-developing precision sensory solutions across bakery, beverage, dairy, and wellness, we ensure every product resonates: not just in taste, but in the full sensory experience.

Why it works: Leads with the purpose statement (more powerful), then supports it with specifics. "That work" is short and confident. Preserves the strong closing line about full sensory experience.

What Sets Us Apart — Section Heading

ORIGINAL

What Sets Us Apart — Science-led development, pre-validated systems, and rigorous quality – built for scale.

ENHANCED

What Sets Us Apart — Application-specific expertise, pre-validated Senso systems, and rigorous QA/QC, built for brands that cannot afford to fail at scale.

Why it works: More specific and emotionally resonant. "Cannot afford to fail at scale" speaks directly to the business risk every NPD manager carries — and positions Sensorisch as the safe, reliable choice.

Get In Touch — Missing Headline (BUG)

ORIGINAL

 # (blank heading tag)

ENHANCED

Ready to bring your next flavour to life?

Why it works: The H1 heading renders as blank. This is a live bug that makes the page look broken. The suggested copy is a direct, optimistic invitation that matches the collaborative tone of the CTA section.

PART B — Image Audit

Location	About page hero banner — Desktop (about-web.jpg)
Current image / alt text	about-web.jpg — Currently shows a group of people working on laptops with "Science - Led Innovation Meets Culinary Craft" headline overlaid in red text on a white background.
Issue	The current image is a generic "team at laptops" stock photo that communicates a tech startup or IT company — not a precision flavour and ingredient formulation house. The subjects appear to be students or software developers, completely misaligned with the B2B food-science audience. Additionally, the headline contains a spacing error ("Science - Led" instead of "Science-Led"). The image does nothing to build credibility with an NPD manager or procurement buyer evaluating a flavour supplier.
Recommended image	A wide-format, atmospheric image of a food scientist at a clean R&D lab bench, examining a small glass vial of amber extract against a softbox light. Rows of precisely labelled ingredient vials are visible in the background, shallow depth of field. Warm, natural tones. The image conveys precision, expertise, and the actual nature of the work — flavour science, not software.
Search keywords	food scientist R&D lab bench examining vial, flavour development laboratory professional, ingredient formulation workspace warm light
Current screenshot	*Current live banner — About page hero (above the fold):*  ⚠ **Issues visible:** (1) Generic "team at laptops" stock photo — unrelated to food science or flavour formulation. (2) Headline spacing error: "Science - Led" should be "Science-Led." (3) Image conveys a tech startup, not a precision ingredient formulation house. (4) The photo subjects appear to be students/coders, not food scientists or R&D professionals — misaligned with the B2B audience.

Location	Our Story section (our-story.png)
Current image / alt text	our-story.png — Described as "Sensorisch R&D and application lab"
Issue	If this shows an empty or staged lab, it misses the opportunity to show the human side of the brand. A B2B buyer wants to see evidence of real capability, not a showroom.
Recommended image	A candid-style photograph of a food scientist in a white coat, examining a small sample vial against a light box in a clean, well-equipped lab. Equipment is visible in the background but out of focus. The image conveys genuine expertise and active R&D.

Search keywords	food scientist examining sample vial lab coat, R&D food laboratory candid professional, flavour chemist quality testing

PAGE 3 — APPLICATIONS & SOLUTIONS

sensorisch.com/applications-solutions

PART A — Content Enhancement

Page Title Tag

ORIGINAL

Why Choose Senso Ranges?

ENHANCED

Senso Ranges | Application-Specific Flavour Systems — Sensorisch

Why it works: The current title is a question, not a description — wasting the SEO title slot. The replacement leads with the product range name, describes what they are, and ends with the brand.

Hero Headline

ORIGINAL

Senso Application Ranges

ENHANCED

Nine Application Ranges. Every Category. Zero Compromise.

Why it works: The current headline is descriptive but flat. The enhancement quantifies the portfolio, signals complete category coverage, and ends with a quality commitment — three things that matter to a buyer evaluating a flavour partner.

SensoBake — Product description

ORIGINAL

Flavours that enrich cakes, cookies, pastries, and breads with oven-true performance.

ENHANCED

Heat-stable flavour systems designed to survive baking temperatures while delivering rich, true-to-type aroma in every finished product — from artisan sourdoughs to mass-market biscuits.

Why it works: Adds the technical mechanism ("survive baking temperatures"), expands the application range, and covers both premium and mass-market audiences.

SensoTreat — Product description

ORIGINAL

Playful and nostalgic profiles with controlled release for long-lasting flavour.

ENHANCED

Flavour systems engineered for controlled release in confectionery matrices — delivering playful, nostalgic profiles that linger through every bite, from first unwrap to last chew.

Why it works: Adds "matrices" (technical credibility), extends the sensory narrative through the consumption journey ("first unwrap to last chew"), and keeps the consumer-friendly tone.

SensoCreme — Product description

ORIGINAL

Creamy, authentic notes for ice creams, Yogurt, milkshakes, and cheeses with heat-stable options.

ENHANCED

Dairy-forward flavour systems delivering authentic, creamy profiles in ice cream, yogurt, milkshakes, and specialty cheese — with heat-stable options for cooked and processed applications.

Why it works: Fixes the capitalisation error ("Yogurt"). Adds "dairy-forward" as a descriptor. Specifies "cooked and processed applications" for the heat-stable claim — more technically precise.

SensoSip — Product description

ORIGINAL

Architectures tuned for clarity, fizz stability, and shelf-life resilience across beverages.

ENHANCED

Flavour architectures engineered for beverage clarity, carbonation stability, and extended shelf life — performing consistently across juices, carbonated drinks, energy beverages, and craft mocktails.

Why it works: "Architectures" alone is jargon without context — adding "Flavour architectures" clarifies. Lists the specific beverage types to aid search and scanning.

Senso+ — Product description

ORIGINAL

Palatable profiles for syrups and chewables with bitterness modulation and aftertaste control.

ENHANCED

Precision taste-modulation systems that make pharmaceutical syrups, chewable tablets, and supplements genuinely palatable — masking bitterness and eliminating aftertaste without compromising active stability.

Why it works: "Precision taste-modulation" is a stronger positioning phrase. "Without compromising active stability" addresses the primary technical concern in pharma flavouring.

SensoActive — Product description

ORIGINAL

Flavours that enhance proteins, botanicals, minerals, and vitamins while masking off-notes.

ENHANCED

Nutraceutical flavour systems that amplify the appeal of protein powders, botanical supplements, and functional foods — masking off-notes from active ingredients while keeping every formulation clean-label compliant.

Why it works: Adds "clean-label compliant" — critical for nutraceutical buyers — and specifies "active ingredients" as the source of off-notes, which is technically precise.

SensoSpice — Product description

ORIGINAL

Authentic spice & herb signatures that add richness to soups, sauces, snacks, and seasonings.

ENHANCED

True-to-origin spice and herb flavour systems — oil- and water-soluble options delivering authentic heat, depth, and complexity to savoury applications from premium sauces to snack seasonings.

Why it works: Adds the delivery format options (oil- and water-soluble) which are key buying criteria. "True-to-origin" is a stronger quality claim than "authentic." Specifies the sensory qualities (heat, depth, complexity).

SensoCare — Product description

ORIGINAL

Cooling, refreshing notes for toothpastes, mouthwashes, and personal-care applications.

ENHANCED

Oral-safe flavour and sensation systems delivering lasting cooling freshness, controlled menthol intensity, and antimicrobial compatibility — for toothpastes, mouthwashes, and premium personal-care formulations.

Why it works: Adds "oral-safe" (the most important regulatory qualifier), "controlled menthol intensity" (a specific and differentiated capability), and "premium" to reflect the Bespoke positioning.

SensoNat — Product description

ORIGINAL

Nature-derived flavours & colours for clean-label ambitions with extracts and distillates.

ENHANCED

100% nature-derived flavours and colours — extracted, distilled, and blended to meet clean-label compliance, organic certification requirements, and the taste expectations of today's conscious consumer.

Why it works: Strengthens the natural claim by specifying extraction and distillation methods. Adds "organic certification requirements" and "conscious consumer" — the latter is the end market that brand buyers are ultimately serving.

Bottom CTA — Headline

ORIGINAL

Ready to Accelerate Your Product Development?

ENHANCED

Your next product launch starts here.

Why it works: Shorter, more confident, and outcome-focused. "Starts here" positions Sensorisch as the beginning of success, not just a supplier. Also avoids "accelerate" which is overused in B2B marketing.

PAGE 4 — BESPOKE

sensorisch.com/bespoke

PART A — Content Enhancement

Page Title Tag

ORIGINAL

Why Partner with us

ENHANCED

Bespoke Flavour Development | Custom Ingredient Solutions — Sensorisch

Why it works: The current title is a question fragment. The replacement uses the primary keyword phrase "Bespoke Flavour Development," which buyers will search, and includes "Custom Ingredient Solutions" as a secondary term.

Hero Headline

ORIGINAL

Tailored to Your Unique Needs

ENHANCED

Your Flavour. Your Brand. Exclusively Yours.

Why it works: Shorter, more emotionally resonant. Three parallel phrases build to the most powerful word: "Exclusively Yours." This speaks directly to the IP ownership and brand differentiation that the Bespoke page promises.

Hero Sub-CTA

ORIGINAL

Start Your Project

ENHANCED

Tell Us About Your Brief

Why it works: More specific — qualifies the audience. "Tell us about your brief" pre-screens for buyers who are serious, which is appropriate for a bespoke development service.

Exclusive Flavour Development — copy

ORIGINAL

Create distinctive taste profiles that set your products apart and build brand loyalty.

ENHANCED

Develop proprietary flavour architectures that are unique to your brand — protected by NDAs, owned entirely by you, and built to deepen consumer loyalty with every purchase.

Why it works: Adds "proprietary" and "protected by NDAs" — the two concerns that drive bespoke development decisions. "Built to deepen consumer loyalty" speaks to long-term commercial value.

Manufacturing Flexibility — copy

ORIGINAL

Liquid, powder, water-soluble, or oil-soluble formats tailored to your production needs.

ENHANCED

Choose from liquid, powder, water-soluble, or oil-soluble delivery formats; each engineered to integrate seamlessly into your existing manufacturing process, with no line modifications required.

Why it works: "With no line modifications required" removes a significant manufacturing objection and makes the value proposition immediately tangible for production managers.

Bottom CTA — Headline

ORIGINAL

Ready to Create Your Signature Flavour?

ENHANCED

Let's build a flavour your customers won't forget.

Why it works: More conversational and consumer-outcome oriented. "Your customers won't forget" translates the product development decision into a customer experience benefit — which is ultimately the brand manager's objective.

Bottom CTA — Body

ORIGINAL

Partner with Sensorisch for bespoke flavour solutions that differentiate your brand and delight your customers. Let's build something extraordinary together.
ENHANCED Bespoke development with Sensorisch means exclusive formulations, full IP ownership, and a dedicated R&D team working solely on your brief. Every flavour we build is tested, validated, and ready to scale.
Why it works: The original body is vague and relies on adjectives ("differentiate," "delight," "extraordinary"). The replacement lists the specific deliverables that qualify a buyer: exclusive formulations, IP ownership, dedicated R&D, and scale-readiness.

PART B — Image Audit

Location	Bespoke hero banner — Desktop (bespoke-web.png)
Current image / alt text	bespoke-web.png — Banner behind "Tailored to Your Unique Needs"
Issue	The Bespoke page hero needs to convey exclusivity, craftsmanship, and scientific precision — three things that justify a premium bespoke development fee. A generic ingredient photo fails on all three.
Recommended image	A close-up, richly lit image of a flavourist's hand writing sensory notes in a leather notebook, with labelled sample vials and pipettes visible on the bench beside it. Warm, natural light. The composition conveys attention to detail and bespoke craftsmanship.
Search keywords	flavourist notebook handwritten sensory notes vials, food scientist R&D notebook close up, bespoke formulation development craftsmanship

PAGE 5 — INSIGHTS

sensorisch.com/insights

PART A — Content Enhancement

Page Title Tag

ORIGINAL

News & Trends

ENHANCED

Insights | Flavour Trends, R&D News & Industry Analysis — Sensorisch

Why it works: The current title is generic ("News & Trends"). The replacement is descriptive, keyword-rich, and immediately distinguishes Sensorisch's insights from a generic news aggregator.

Hero Headline

ORIGINAL

Industry Insights & Updates

ENHANCED

The Intelligence Behind Better Products

Why it works: More evocative and brand-voice consistent. "Intelligence" connects to the data-driven, science-led brand identity. "Better Products" is the outcome every reader is working towards.

Hero CTA 1

ORIGINAL

Request Full Catalogue

ENHANCED

Download Product Catalogue

Why it works: "Request" implies waiting and friction. "Download" implies instant access — a higher-converting CTA for an action that should be immediate and frictionless.

Article 1 — Headline

ORIGINAL

Green Chemistry Solutions for a Sustainable Future

ENHANCED

How Green Chemistry Is Reshaping Food Ingredient Sourcing

Why it works: More specific to Sensorisch's actual audience (food ingredient buyers) and uses "reshaping" which implies urgency and relevance. The original headline could belong to a chemistry trade journal.

Article 1 — Sub-copy

ORIGINAL

Advancing eco-friendly chemical processes through innovation and responsibility.

ENHANCED

From solvent reduction to bio-based extraction, how the shift to greener chemistry is creating cleaner supply chains — and what it means for your next product development cycle.

Why it works: Specific, actionable, and connects the macro trend to the reader's immediate business reality. Mentions specific methods (solvent reduction, bio-based extraction) to establish expertise.

Article 2 — Headline

ORIGINAL
Flavours Shaping Consumer Preferences in 2025

ENHANCED
The Flavour Trends Defining Consumer Choices in 2026 — and Beyond

Why it works: "And Beyond" creates a longer editorial shelf life and signals strategic depth rather than a trend roundup. More useful to a brand manager planning 18-month NPD roadmaps.

Article 3 — Headline

ORIGINAL
New R&D Breakthroughs in Natural Colour Extraction

ENHANCED
Sensorisch R&D: Breakthrough Advances in Natural Colour Stability and Extraction

Why it works: Adding "Sensorisch R&D" establishes this as a proprietary insight piece rather than curated industry news — much higher credibility and much better for SEO and brand authority.

Article 4 — Headline

ORIGINAL
Clean-Label Ingredients Gaining Momentum

ENHANCED
Why Clean-Label Is No Longer Optional — And How to Formulate for It

Why it works: "No Longer Optional" creates urgency and a clear editorial position. "How to Formulate for It" turns a trend observation into an actionable guide — making the article more valuable to the target reader.

Article 5 — Headline

ORIGINAL
Advancing Food Safety with Precision Testing

ENHANCED
Precision Testing, Faster Compliance: How Modern Lab Techniques Are Changing Food Safety Standards

Why it works: More specific and benefit-led. "Faster Compliance" is the commercial benefit that a regulatory affairs manager will click on immediately.

Bottom CTA — Headline

ORIGINAL
Expert guidance, just a message away

ENHANCED
Ready to put these insights to work?

Why it works: Contextually appropriate for an Insights page — it continues the editorial conversation. Invites the reader to apply what they have just learned, which is a natural conversion from an insights page to a project enquiry.

PART B — Image Audit

Location	Article 1 — Green Chemistry (news-1.jpg)
Current image / alt text	news-1.jpg — "Green Chemistry Solutions for a Sustainable Future"
Issue	A generic green/chemistry image (beakers, plants, blue liquids) is a cliché for this topic and indistinguishable from thousands of similar stock photos used by competitor publications.
Recommended image	An overhead editorial photo of a laboratory extraction setup: a glass Soxhlet extractor with a deep green plant-based solvent, surrounded by dried herbs and botanical samples. Scientific but beautiful. Natural and warm tones.
Search keywords	botanical extraction laboratory Soxhlet green chemistry, plant extract distillation scientific editorial, sustainable lab process botanical

Location	Article 2 — Flavour Trends (news-2.jpg)
Current image / alt text	news-2.jpg — "Flavours Shaping Consumer Preferences in 2025"
Issue	Trend articles are often illustrated with generic "food on table" shots that signal nothing about the editorial intelligence of the piece.
Recommended image	A stylised flat-lay of globally diverse ingredients that represent 2025 flavour trends: yuzu, miso paste, smoked salt, butterfly pea flower, date syrup, and fermented black garlic. Each labeled with a small card. Dark slate background.
Search keywords	global flavour trend ingredients editorial flat lay, emerging food ingredients 2025 collection, trend flavour diversity dark background

Location	Article 3 — Natural Colour Extraction (news-3.jpg)
Current image / alt text	news-3.jpg — "R&D Breakthroughs in Natural Colour Extraction"
Issue	Natural colour articles are frequently illustrated with a rainbow of smoothies — attractive but scientifically uninformative. The Sensorisch brand is science-first.
Recommended image	A scientific close-up of centrifuge tubes arranged by colour: deep red beetroot extract, golden turmeric, vivid blue spirulina, and bright green matcha — each catching the light differently. Clean white background. Laboratory aesthetic.
Search keywords	natural colour extract tubes centrifuge laboratory, beetroot turmeric spirulina matcha extract scientific, plant pigment extraction vials

Location	Article 4 — Clean Label (news-4.jpg)
Current image / alt text	news-4.jpg — "Clean-Label Ingredients Gaining Momentum"
Issue	Clean-label imagery defaults to simple ingredients (oats, honey, eggs) which are too consumer-facing for a B2B editorial audience.
Recommended image	A close-up of an ingredient label being inspected under a magnifying glass, with short, recognisable ingredient names clearly visible. White background. Clean, editorial, journalistic.
Search keywords	ingredient label magnifying glass close up, clean label food regulation inspection, short ingredient list editorial B2B

Location	Article 5 — Food Safety Testing (news-5.jpg)

Current image / alt text	news-5.jpg — "Advancing Food Safety with Precision Testing"
Issue	Generic laboratory imagery (pipettes into microplates, microscopes) is used by virtually every food science publication and is indistinguishable from pharmaceutical or chemical industry images.
Recommended image	A food safety technician in a white coat and blue gloves carefully pipetting a clear liquid into a precisely labeled test vial, with a chromatography system visible in the background. Focused, competent, confident.
Search keywords	food safety technician pipette vial laboratory, quality control food testing professional lab, HPLC chromatography food analysis

PAGE 6 — CONTACT

sensorisch.com/contact

PART A — Content Enhancement

Page Title Tag

ORIGINAL

Let's Create Something Extraordinary

ENHANCED

Contact Sensorisch | Start a Flavour Project or Request Samples

Why it works: The current title is a tagline masquerading as a page title. The replacement is search-functional — buyers searching "request flavour samples" or "contact ingredient supplier India" will find this page.

Hero Headline

ORIGINAL

Let's Create Something Extraordinary

ENHANCED

Your Brief. Our Science. Extraordinary Results.

Why it works: Keeps the emotional register of "extraordinary" but makes it collaborative and outcome-focused. Three short phrases create stronger visual rhythm and mirror the audience's journey: they bring the brief, Sensorisch brings the science.

"How Can We Help" — Section Heading

ORIGINAL

How Can We Help You? — Choose the best way to connect with our team based on your needs

ENHANCED

Choose How You'd Like to Connect

Why it works: Simpler, cleaner. Removes the redundant sub-phrase. Lets the four connection tiles below speak for themselves.

Option 1 — Start a Conversation

ORIGINAL

Discuss your requirements with our flavour experts

ENHANCED

Tell us what you're building and we'll match you with the right flavour expert within one business day.

Why it works: Adds a specific time commitment (one business day) which builds confidence in responsiveness. "What you're building" is more evocative than "your requirements."

Option 2 — Book a Tasting Session

ORIGINAL

Experience our flavours firsthand at our facilities

ENHANCED

Visit our Chennai lab and taste the Senso ranges firsthand — guided by our application specialists.

Why it works: Specific (Chennai lab, Senso ranges, application specialists). Removes the generic "at our facilities" which is cold and institutional.

Form Heading
ORIGINAL *Get in Touch — Tell us about your project and we'll get back within 24 hours.*
ENHANCED Tell Us About Your Project — We respond within one business day.
Why it works: "24 hours" is a bold claim that could be broken on weekends or holidays. "One business day" is standard, more reliable, and equally reassuring to a procurement team.

FAQ — Response time answer
ORIGINAL *Initial samples are typically delivered within 5–7 business days for standard applications, and 10–14 days for complex bespoke formulations.*
ENHANCED Standard application samples are typically ready within 5–7 business days. For complex bespoke formulations, allow 10–14 business days. Rush timelines may be available — ask your account contact.
Why it works: Adds "Rush timelines may be available" — this opens a conversation and signals flexibility, which is important for brands with tight NPD deadlines. Clarifies "business days" in both cases for consistency.

PART B — Image Audit

Location	Contact page hero banner — Desktop (contact-web.jpg)
Current image / alt text	contact-web.jpg — Banner behind "Let's Create Something Extraordinary"
Issue	Contact page hero imagery is often wasted — either a generic handshake, an empty office, or a phone. For Sensorisch, the hero should reinforce capability and invitation simultaneously.
Recommended image	A welcoming, warm-toned image of a bright, modern meeting room adjacent to a lab space, with two chairs, sample vials arranged on a table, and a large window showing greenery. Inviting but professional. Conveys "we are ready to meet you."
Search keywords	modern food lab meeting room welcoming, R&D company meeting professional natural light, food science consultation space

Location	Contact map / location section
Current image / alt text	No image — text-only address block
Issue	The location section is text-only. A real photo of the Sensorisch facility exterior or reception area would build trust significantly — particularly for international buyers assessing supplier credibility.
Recommended image	A clean exterior or reception photo of the Sensorisch facility at SIDCO Industrial Estate, if available. If not, use an illustrative image of a modern Indian food-tech facility exterior — well-maintained, clearly professional.
Search keywords	modern food manufacturing facility exterior India, industrial food company building professional, food tech startup office Chennai exterior

GLOBAL RECOMMENDATIONS

Improvements that apply across all pages

Content & Copy — Sitewide

#	Recommendation	Detail
1	**Add social proof / testimonials**	Not a single client logo, testimonial, or case study appears anywhere on the site. For a B2B formulation house, this is the single highest-impact missing element. Add a "Trusted by Brands Like Yours" logo strip to the homepage and one attributed quote to the About page.
3	**Standardise the Get-in-Touch CTA image**	The same beaker-with-plant image (get-in-touch.png) appears on every single page's CTA section. This creates visual monotony. Use a different, contextually relevant image per page (e.g., collaboration scene on Contact, lab bench on About, finished product on Applications).
4	**Add a meta description to all pages**	No page appears to have a meta description. These are the grey text lines that appear in Google search results and dramatically affect click-through rates. Each page should have a unique, 150–160 character description.
5	**Implement structured data (Schema.org)**	Add Organization schema to the homepage and About page, and Product schema to each Senso range page. This improves how Google understands and presents the site in search results.
6	**Add a Resources / Downloads section**	B2B buyers need product specifications, technical data sheets, and compliance certificates before making supplier decisions. A dedicated Resources page or downloadable section on the Applications page would reduce the sales cycle significantly.
7	**Capitalisation consistency**	The site inconsistently capitalises "Yogurt" (capital Y in SensoCreme), "Flavour" vs "flavour," and product category names. Establish a single capitalisation style guide and apply it uniformly.
8	**UK vs US English — choose one**	The site uses "flavour" (UK) consistently — good. However, "Specialized" (US) appears on the homepage while "Specialised" (UK) would be consistent. Choose one style and enforce it across all content.

Image Strategy — Sitewide

The current image library suffers from three recurring problems: (1) generic stock photography indistinguishable from competitor sites, (2) consumer-facing lifestyle imagery on B2B pages, and (3) excessive visual repetition (the get-in-touch.png image on every page). The following principles should guide the new image strategy:

- **Recommended stock libraries:** Unsplash (free), Adobe Stock, Shutterstock, Getty Images. For premium editorial food and science photography, consider OFFSET (part of Shutterstock) or Stocksy.
- **Primary visual style:** Dark, moody, studio-lit food photography with warm amber and teal accent tones. This mirrors the brand colour palette and creates a distinctive, premium aesthetic that differentiates from competitor sites.

- **Secondary visual style:** Clean, editorial lab photography with natural daylight. Used for About, Insights, and technical credibility sections.
- **Avoid:** Generic green-leaf-on-white "natural" imagery, smiling model lifestyle shots, cartoon food illustrations, and overlit pastel food photography.
- **Alt text:** Every image on the site should have a descriptive alt text for accessibility and SEO. Currently, several images use the filename as alt text (e.g., "img-1.png") which is an accessibility failure and an SEO miss.
